

A Future-ready Learning Experience by Havergal's Innovation Hub.

Background

Havergal College is one of Canada's preeminent independent schools for girls from Junior Kindergarten to Grade 12. It was founded in 1894 and offers a rigorous curriculum designed around the pillars of academics and well-being.

The Need

Havergal College sought to enhance its educational offering beyond the Ontario curriculum, in order for its students to develop skills, knowledge, and a practice that allows them to thrive now and in the future. Its Digital Micro-Credential program is a future-ready learning experience provided by HC-X—Havergal's innovation hub—working in partnership with experts in nascent and emerging fields of work: Cryptocurrency, Artificial Intelligence, and Pre-Medical Science. For this program, HC-X sought a micro-credentials platform that was user-friendly and included many new features.

These micro-credentials needed to:

- Be easy to customize and design
- Be easy to issue
- Display individual efforts and contributions to act as a record of learning
- Be verified as authentic and tamper-proof
- Be easy to use and share by recipients
- Reflect the HC-X brand and be something recipients would wish to show and share

The Solution

Working with C.TI - Convergence.Tech's verifiable credentials platform, HC-X designed and awarded custom certificates to recognize individual achievements. C.TI enabled HC-X to issue verifiable digital credentials with all the features and capabilities they need for their organization. Their students are now able to store their micro-credentials securely, and share them on social media or with recruiters with ease.

The C.TI platform saved HC-X time and effort with its bulk issue feature and ease of use. They could handle the entire process of issuing and designing credentials themselves, instead of bringing in outside specialist help.

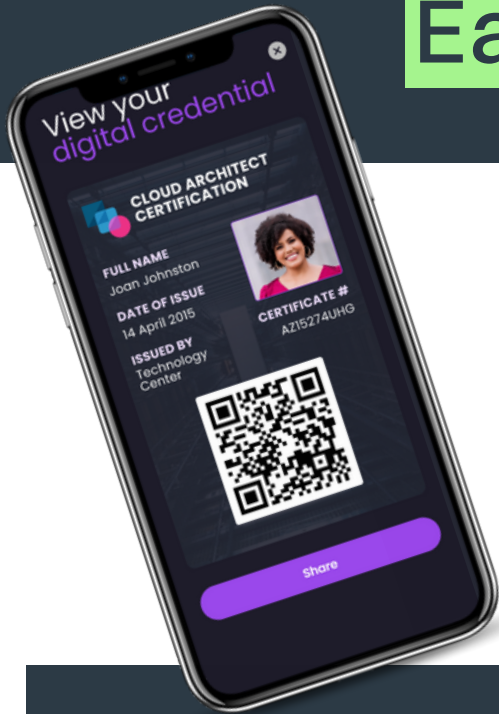

Explore how C.TI helps education providers.

"The experience has been excellent: collaborative, interactive, and a true partnership. I would highly recommend Convergence.Tech and their C.TI platform."

Garth Nichols,
Vice Principal,
Experiential Education & Innovation,
Havergal College

Easy, Secure, Private.

Digital credentials are quickly replacing traditional paper, plastic and pdfs. Many popular approaches don't use standards that will stand the test of time.

C.TI is built for the decentralised future of credentials. Our Verified Credentials are cryptographically secure and impossible to fake, protecting your organisation's reputation while enhancing your brand online and offline.

With C.TI it's simple to create beautiful, customized experiences for your clients. Our turnkey approach allows easy integration with no need to replace your current technology.

Key Features

Fast Start.

Software as a Service (SaaS) platform, accessible through a quick start Web Application or direct API integration.

Secure and Authentic.

Credentials are cryptographically secure and unforgeable.

Easily Shareable.

Easily present & share via social media, email, offline and more.

LMS Integrations.

Automated credential issuance with leading LMSs, SISs, or custom APIs.

Built for your brand.

Branded credentials enhance your organisation's reputation.

Digital Wallets.

User owned and controlled by students to manage their credentials.

Learning Pathways.

Create flexible pathways that visualize opportunities for greater achievements and build portfolios that demonstrate mastery.

Find out how easy it is to get started with Verifiable Credentials.
